

PNSB BSC KPI — Per-Role Process Flow

One flowchart **per role**, each with pseudocode + a Mermaid diagram, so every actor can follow their own

journey through an appraisal cycle.

Rendered with Mermaid — open in any Mermaid-compatible viewer (VS Code, GitHub, Obsidian, etc.)

Glossary (Abbreviations Used)

Abbreviation	Full Form	Meaning
PNSB	Permodalan Negeri Selangor Berhad	The company
BSC	Balanced Scorecard / Kad Skor Imbangan	Strategic performance framework with 4 perspectives
KPI	Key Performance Indicator / Petunjuk Prestasi Utama	Measurable target assigned to each staff
ALP	Ahli Lembaga Pengarah	Board of Directors — highest approval authority
KPE	Ketua Pegawai Eksekutif	Chief Executive Officer (CEO)
HOD	Head of Department / Ketua Bahagian	Division/department head
HR	Human Resources / Bahagian Sumber Manusia	HR department that administers the appraisal process
KB	Kakitangan Biasa	General/Regular Staff group (pre-moderation scores)
MOD1	Moderasi Pertama (oleh HR)	First moderation round, conducted by HR — per department

Abbreviation	Full Form	Meaning
MOD2	Moderasi Kedua (oleh KPE)	Second moderation round, conducted by the CEO — org-wide
Point A	Verification	Manager verifies/overrides KPI weight & targets at approval time
Point B	Appraisal Scoring	Manager enters final KPI achievement & competency scores
KIV	Keep In View	Pending — to be confirmed or scoped in a later phase

Role → Category → Weighting Quick-Map

How each role maps to its system `category`, Spatie `role`, and scoring split. This is what drives which steps appear in each flowchart below.

Role (this doc)	System <code>category</code>	Spatie <code>role</code>	KPI : Competency	Special powers
CEO / KPE	<code>ceo</code>	<code>executive-director</code>	100% : 0%	No manager → self-appraises; runs MOD2 org-wide
HOD / Ketua Bahagian	<code>executive</code>	<code>division-head</code>	80% : 20%	Is the <code>manager_id</code> of their staff → appraises subordinates
Executive / Eksekutif	<code>executive</code>	<code>staff</code>	80% : 20%	Standard full KPI + competency journey
Support / Sokongan	<code>support</code>	<code>staff</code>	0% : 100%	Skips entire KPI workflow — competency only
HR Admin	— (role-based)	<code>hr-admin</code>	—	Opens/advances cycle, runs MOD1 , locks grades

Scorecard status flow: draft → kpi_submitted → kpi_approved → appraisal → moderation → completed → locked

(Support fast-tracks draft → appraisal, skipping kpi_submitted / kpi_approved.)

Cycle phase flow: draft → active → appraisal → moderation → closed

Grade bands (auto from final_score): ≥90 Cemerlang · 76–89 Sangat Baik · 60–75 Baik · 50–59 Memuaskan · <50 Perlu Diperbaiki

1 CEO / KPE (Ketua Pegawai Eksekutif)

100% KPI, no manager → **self-appraises as board proxy**. After everyone is graded, the KPE runs the

org-wide MOD2 moderation, then waits for HR to lock.

Pseudocode

```
ON cycle.status == active:
    setUpOwnScorecard()                // KPI lines only (100% KPI)
    balanceWeightsTo100() PER perspective
    submitForVerification()             // status: draft -> kpi_submitted
    selfVerifyOwnKpis()                 // isSelfAppraiser == true; status -> kpi_
                                        // (Point A: may override own weight/target)

ON results window open (kpi_approved):
    FOR EACH review_period:
        recordAchievement(0..100)
    finalizeResults()                   // status -> appraisal

ON appraisal:
    selfReviewOwnScorecard()            // Point B: KPI score, cap 100; status -> r

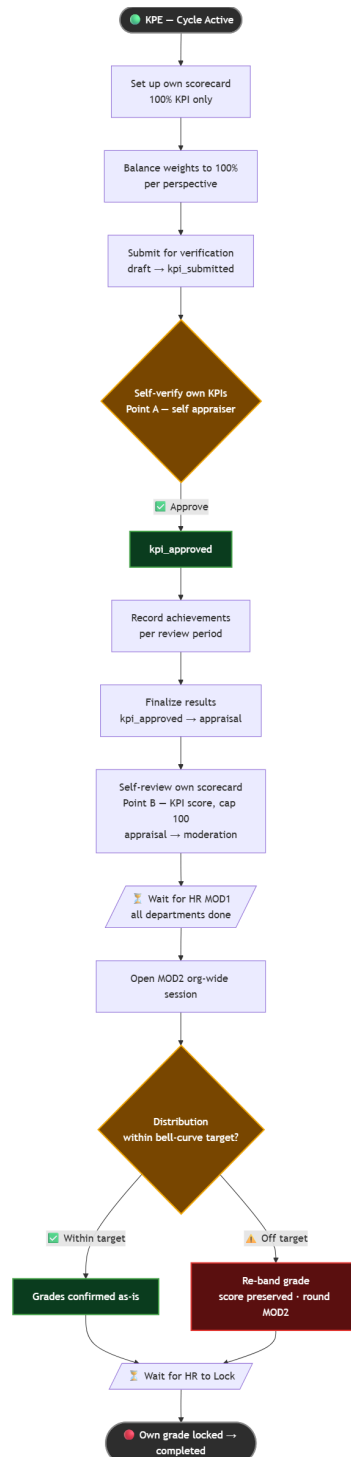

ON cycle.status == moderation:
    WAIT until HR completes MOD1 (all departments)
    openMod2OrgWideSession()
    FOR EACH graded scorecard org-wide:
        IF distribution off target:
            reBandGrade(before -> after) // score preserved, logged round = MOD2
    // no self-moderation of own card
```

ON HR locks grades:

```
receiveFinalGrade()
```

```
// status -> completed, then locked
```

Flowchart

2 HOD / Ketua Bahagian (Division Head)

Wears **two hats**: (a) their own 80/20 scorecard journey, and (b) as the `manager_id` of their staff, they

verify and score subordinates. Manager override at appraisal is **final** — no rejection back to the employee.

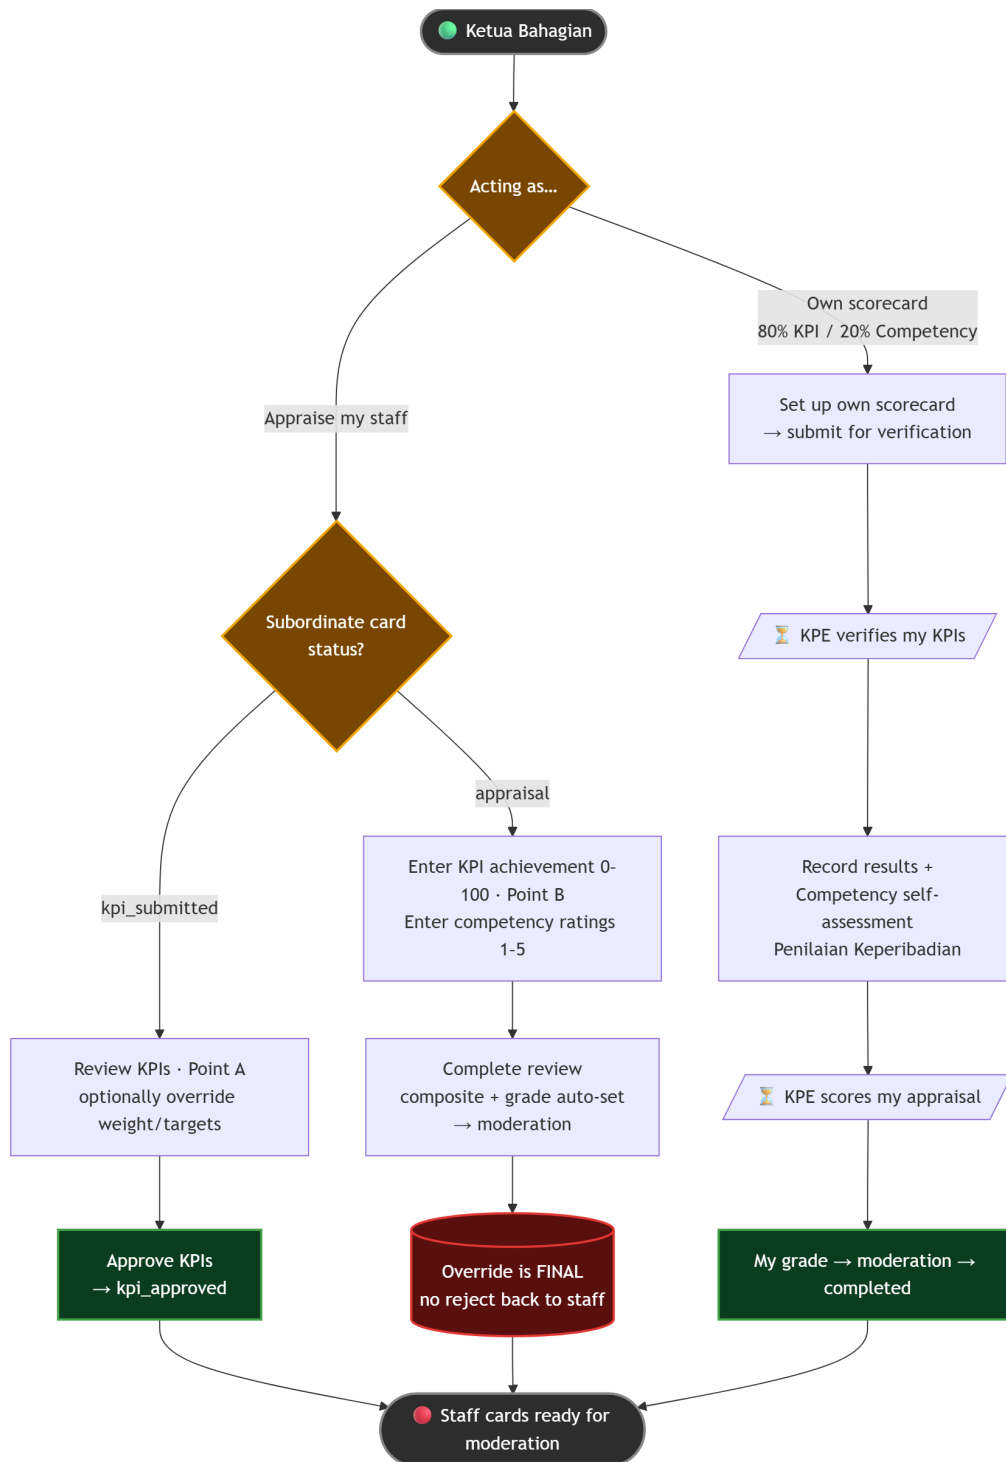

Pseudocode

```
// ---- HAT A: own scorecard (category executive, 80% KPI / 20% competency) ----
ON cycle.status == active:
    setUpOwnScorecard(); submitForVerification()    // draft -> kpi_submitted
    WAIT manager(=KPE) verifies                    // -> kpi_approved
    recordResults(); selfAssessCompetencies(1..5)    // attach evidence
    WAIT manager(=KPE) scores appraisal             // -> moderation -> completed

// ---- HAT B: as appraiser of own subordinates ----
ON subordinate.scorecard.status == kpi_submitted:
    openApproval(subordinate)
    reviewKpis()
    optionally overrideWeightAndTargets()           // Point A, stage = verification, 100%
    approveKpis()                                   // -> kpi_approved (no reject-back)

ON subordinate.scorecard.status == appraisal:
    enterKpiAchievement(0..100)                     // Point B, override logged if different
    enterCompetencyRatings(1..5)                   // self-rating shown as reference on
    completeReview()                                // composite + grade auto-set; -> moderation
    // override is FINAL - no rejection back to employee
```

Flowchart

3 Executive / Eksekutif

Standard staff member, **80% KPI / 20% competency**. Full journey: set KPIs → manager-approved → record results → competency self-assessment → manager scores → moderation → final grade.

Pseudocode

```

ON cycle.status == active:
    openScorecard()                // KPI lines auto-generated from library
    editKpis(); balanceWeightsTo100() // per perspective
    setThresholdMeetStretch() FOR each KPI
    submitForVerification()        // status: draft -> kpi_submitted

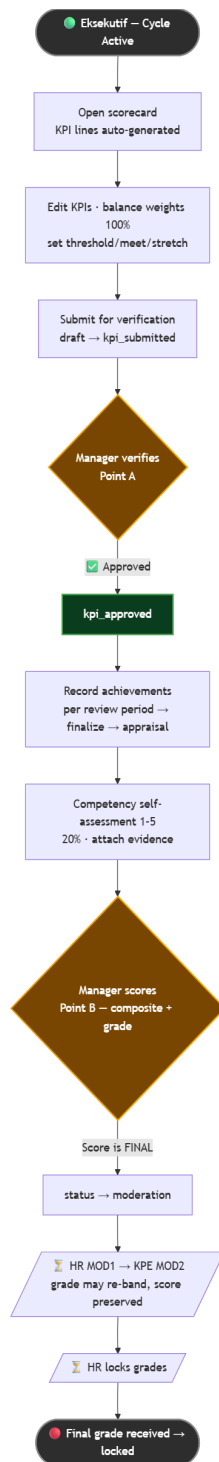

WAIT manager verifies (Point A)    // status -> kpi_approved

ON kpi_approved:
    FOR EACH review_period: recordAchievement(0..100)
    finalizeResults()              // status -> appraisal
    selfAssessCompetencies(rate 1..5) // 20% section; attach evidence files

WAIT manager scores (Point B)      // composite + grade; status -> moderation
WAIT HR MOD1 + KPE MOD2            // grade may be re-banded (score preserved)
WAIT HR lock                       // status -> completed -> locked
receiveFinalGrade()

```

Flowchart

4 Support / Sokongan & Teknikal

0% KPI / 100% competency — fast-track. No KPI setup, no submit-for-verification, no results window.

Goes straight to competency self-assessment, then manager scores, then moderation.

Pseudocode

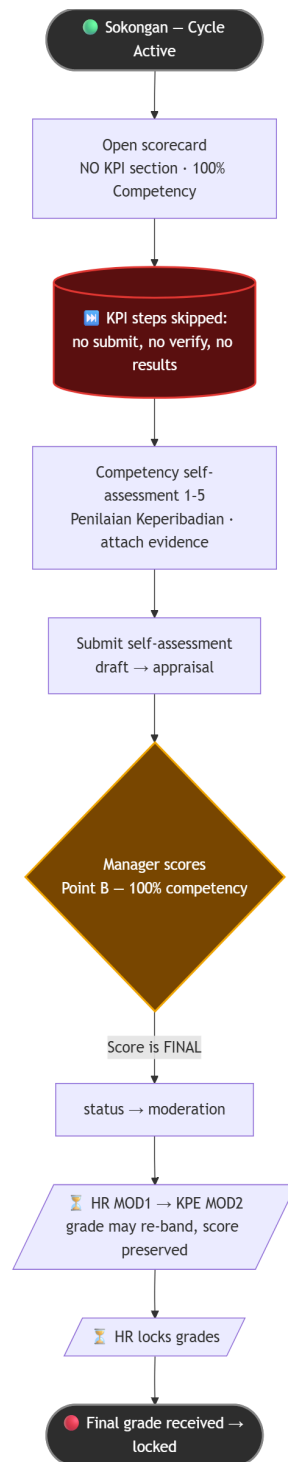

```

ON cycle.status == active:
    openScorecard()                // NO KPI lines (KPI weight = 0)
    selfAssessCompetencies(rate 1..5) // 100% competency
    attachEvidenceFiles()
    submitSelfAssessment()          // status: draft -> appraisal (skips kpi_s

WAIT manager scores (Point B)      // 100% competency composite + grade; statu
WAIT HR MOD1 + KPE MOD2             // grade may be re-banded (score preserved
WAIT HR lock                        // status -> completed -> locked
receiveFinalGrade()

```

Flowchart

5 HR Admin (Bahagian Sumber Manusia)

*Drives the whole cycle: opens it, generates scorecards, advances phases, runs **MOD1** per department, waits for the KPE's **MOD2**, then **locks** grades to close the cycle.*

Pseudocode

```

createCycle()                                // cycle.status = draft
generateScorecards()                        // one per appraisal-chain employee
advancePhase(): draft -> active              // KPI setting + execution window opens

// ... employees & managers work through their cards ...
advancePhase(): active -> appraisal          // freeze results; managers finish scoring
advancePhase(): appraisal -> moderation      // grades enter calibration

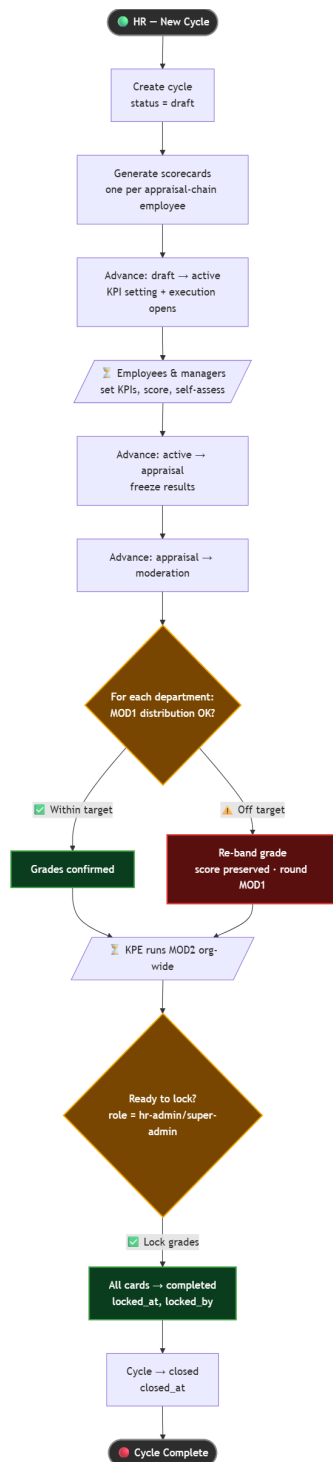

FOR EACH department:
    openMod1Session(department)
    compareActualVsBellCurveTarget()
    IF distribution off target:
        reBandGrade(before -> after)        // score preserved, logged round = MOD1

WAIT KPE completes MOD2 (org-wide)

IF cycle.status == moderation AND role in [super-admin, hr-admin]:
    lockGrades()                            // all scorecards -> completed (locked_at,
                                           // cycle.status -> closed (closed_at)

```

Flowchart

Bell Curve Target Reference (for Moderation — Sesi Moderasi)

Based on 91 total Kakitangan Biasa (KB / Regular Staff). Percentages scale per headcount each cycle.

Kategori	Sasaran (Target)	% Target	Trigger for Moderation
Cemerlang (Excellent)	3	~3%	If actual > 3, downgrade excess to Sangat Baik
Sangat Baik (Very Good)	16	~18%	If actual > 16, downgrade excess to Baik
Baik (Good)	61	~67%	Bulk of staff should land here
Memuaskan (Satisfactory)	7	~8%	If actual < 7, upgrade some from Perlu Diperbaiki
Perlu Diperbaiki (Needs Improvement)	4	~4%	Minimum maintained for accountability

Rejection & Escalation Summary (Quick Reference)

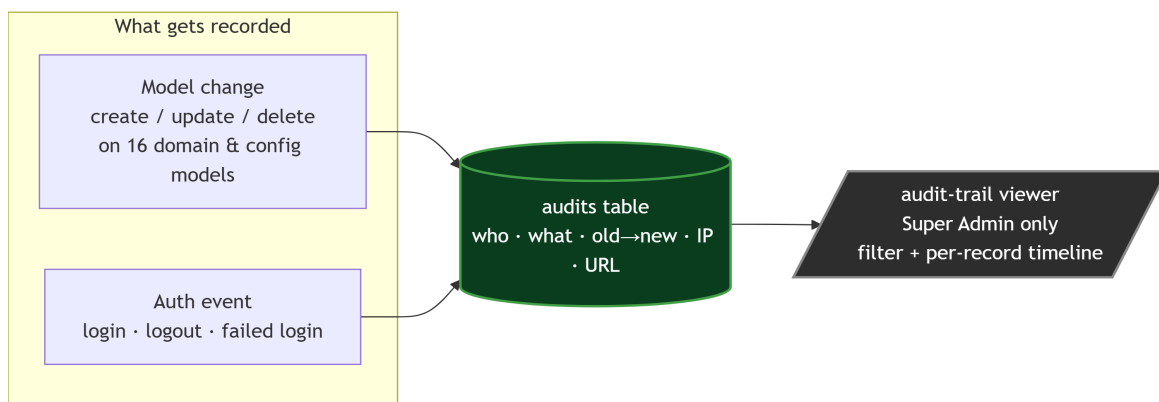

Stage	Who Verifies / Moderates	What Happens	Reject-back?
Individual KPI (Point A)	Manager (HOD / KPE for self)	Verify; may override weight & targets, logged	Approves forward — no formal reject path in-system
Appraisal Score (Point B)	Manager (HOD / KPE for self)	Enters final KPI achievement + competency rating	No — manager override is FINAL
MOD1 — per department	HR Admin	Re-band grades vs bell-curve; score preserved	Adjusts grade only
MOD2 — org-wide	KPE (CEO)	Final org-wide re-band; score preserved	Adjusts grade only
Lock	HR Admin / Super Admin	All cards → completed; cycle → closed	Final — grades frozen

System Audit Trail (cross-cutting — not a per-role appraisal step)

Runs silently behind **every** flow above. Built with `owen-it/laravel-auditing`; viewable at

`/audit-trail`

by **Super Admin only** (separation of duties — the log can record HR's own actions).

What	Detail
Model changes	create / update / delete on all 16 domain & config models (KPIs, BSC, competencies, depts, designations, cycles, templates, users, scorecards...) — old vs new values, actor, IP, URL
Auth events	<code>login</code> / <code>logout</code> attach to the user; <code>login_failed</code> is system-level with the attempted email + IP
Excluded	passwords/tokens never logged; the domain logs (<code>moderation_logs</code> , <code>score_overrides</code> , <code>scorecard_status_logs</code>) are not double-audited
Not recorded	console runs — seeders/tinker don't write audit rows (<code>audit.console</code> off)
Who can view	Super Admin only, at <code>/audit-trail</code>
